Code Snippet (Ticker Bar Animation)

```
(function initTicker() {
  document.addEventListener('DOMContentLoaded', function () {
    var track = document.querySelector('.ticker-track');
    if (!track) return;

    // Collect original items
    var items = Array.from(track.children);
    if (items.length === 0) return;

    // Measure one full set width
    var setWidth = 0;
    items.forEach(function (item) {
      setWidth += item.offsetWidth;
    });

    // Calculate how many copies we need so the content is at least 2x the viewport
    var viewportWidth = window.innerWidth;
    var copies = Math.ceil((viewportWidth * 2) / setWidth) + 1;

    // Clone items enough times
    for (var i = 0; i < copies; i++) {
      items.forEach(function (item) {
        track.appendChild(item.cloneNode(true));
      });
    }

    // Set animation distance to exactly one set width via CSS custom property
    track.style.setProperty('--set-width', setWidth + 'px');
  });
})();
```

```
<div class="ticker-bar">
  <div class="ticker-track">
    <span class="ticker-item">S&P500 <span class="ticker-up">▲1.2%</span></span>
    <span class="ticker-item">NASDAQ <span class="ticker-up">▲0.8%</span></span>
    <span class="ticker-item">10Y US Gov <span class="ticker-down">▼0.3%</span></span>
    <span class="ticker-item">Bitcoin <span class="ticker-up">▲2.5%</span></span>
    <span class="ticker-item">EUR/USD <span class="ticker-down">▼0.1%</span></span>
  </div>
</div>
```

```
.ticker-track {
  display: flex;
  width: max-content;
  animation: ticker-scroll 20s linear infinite;
}

.ticker-bar:hover .ticker-track {
  animation-play-state: paused;
}

@keyframes ticker-scroll {
  0% { transform: translateX(0); }
  100% { transform: translateX(calc(var(--set-width, -50%) * -1)); }
}
```

Next Steps

- Fetching tickers data in real-time via API.
- Fetching article content and images from the database.
- Implementing a Most Read feature based on the number of times I've read an article.

Thank You
